

Retro Stripes Install on 2022+ Nissan Frontier

We do recommend professional installation for our retro stripe decals. The process does require aligning the stripes with various body panels (detailed below) and the use of cut tape is required around the rear wheel well.

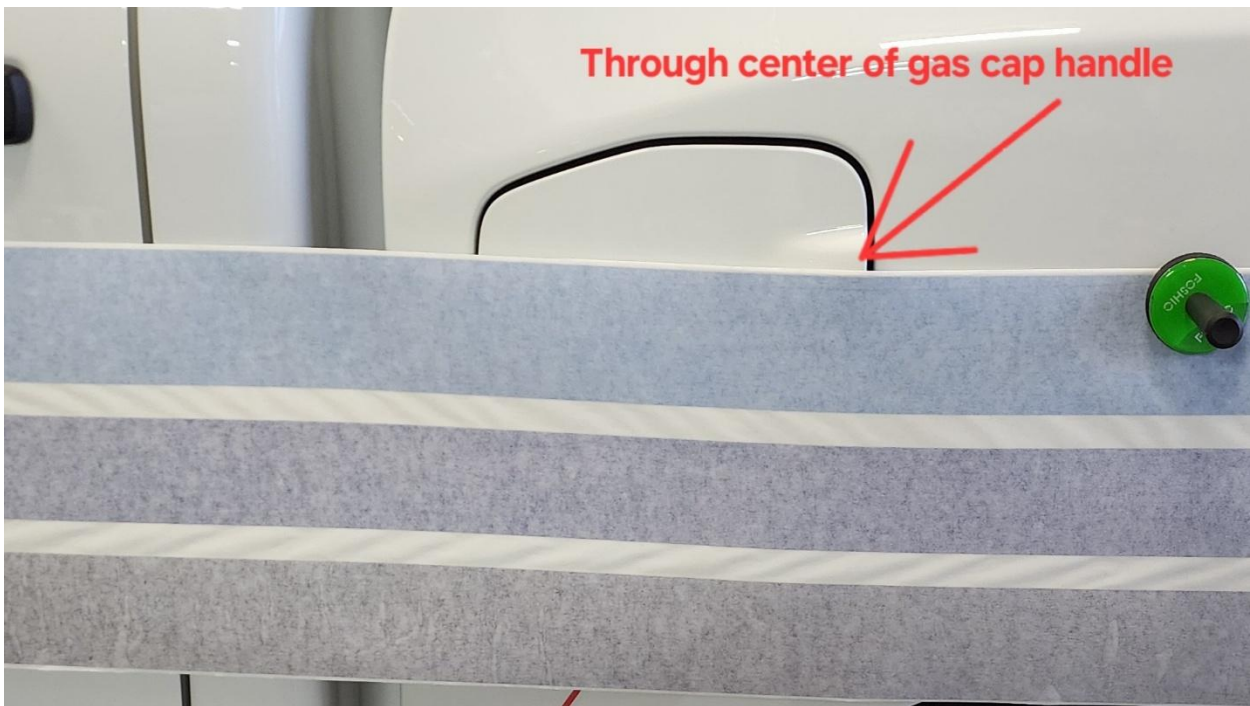

The color of stripes in this installation document may differ from the colors of your stripes, however they are all the same size and specification.

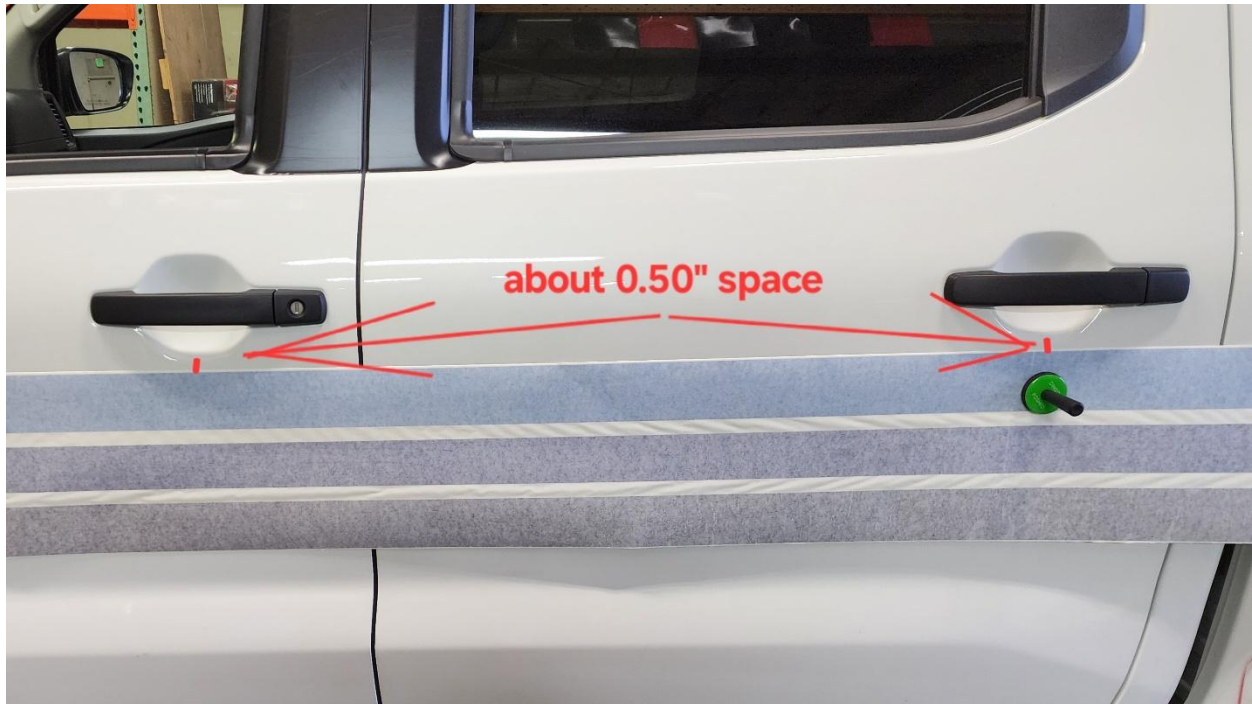

1. We recommend attaching the entire stripe decal with magnets to verify placement before proceeding.

1. Align rear of stripes 1 inch from top body line and 1 inch from rear of body line.

1. Align top of stripe through center of gas cap handle.

1. Align top of stripe a ½ inch from the bottom opening for the door handle.

1. A natural body line is formed around the wheel well. Use cut tape to carefully follow this body line before placing the decal on the truck bed.

1. Take note of the positioning of where we cut the stripes in between the cab and the bed (red rectangle above). You will want to cut the stripes directly in the middle of the opening between the cab and the bed.

Lastly. Enjoy your retro Nissan!
